PROFILE SUMMARY

Cloud & DevOps Engineer experienced in building resilient architectures, orchestrating automation pipelines, and leading cross-functional development teams. Spearheaded the development of resilient cloud architectures on AWS, automating deployment pipelines and reducing manual debugging workflows by 40%.

EDUCATION

Graphic Era University

Dehradun, Uttarakhand

Bachelor of Computer Application

2022 – 2025

- Represented university in Technical Fest
- Open Source Contribution in 3 repositories

SKILLS

Technical skills:

Tools: Python, Java, MySQL, Bash, Git, Docker, Jenkins CI/CD, Ansible, Kubernetes, Grafana, AWS, Terraform, GitHub Actions

EXPERIENCE

Codec Technologies

Remote

Cloud Computing Intern

May 2026 - Jul 2026

- Managed escalating cloud infrastructure expenditures by analyzing fragmented usage data across multiple accounts and services, consolidating it to establish clear, actionable cost visibility throughout rapidly scaling environments.
- Utilized the AWS Cost Explorer API to extract granular billing data, designed interactive Grafana dashboards for real-time cost monitoring, and implemented automated alerting rules to flag spending anomalies.
- Achieved a 26% reduction in monthly cloud spend, maintained 100% operational budget compliance, and cut manual auditing workflows by 8 hours per week through automated reporting.

PROJECTS

Serverless URL Shortener

Mar 2026 – April 2026

- Coded robust backend redirection workflows, structured 2 DynamoDB key-value tables for fast data retrieval, and applied AWS Lambda alongside API Gateway to build a seamless, fully serverless URL routing and redirection architecture handling 1000+ requests.
- Accelerated URL redirection latencies down to a sub-50ms benchmark while improving structural cost-efficiency by eliminating roughly 70% of idle computing expenses through on-demand, pay-per-use serverless execution.

Cloud Log Monitoring & Alert System

April 2026 – May 2026

- Created a centralized log monitoring system using CloudWatch and the ELK Stack to build robust 5+ data pipelines, design real-time dashboards, and implement automated alert notifications for issue detection.
- Achieved 40% faster troubleshooting and reduced manual debugging effort by 10 hours weekly, significantly simplifying error analysis and root-cause identification across the application.

ACHIEVEMENTS

- Led & Managed a 4-person development group at SIH, overseeing end-to-end execution from ideation to final code deployment.
- Earned Microsoft Azure Fundamentals (AZ-900) certification, validating core expertise in cloud architecture, security, and governance.
